Education

- 2019–2023 📖 **Ph.D. Meteorology**, University of Oklahoma
Dissertation: *A Kinematic and Thermodynamic Analysis of the 17 May 2019 McCook / Farnam, Nebraska Tornadoic Supercell*
General Exam: *A Proposed Observation Network to Investigate Deep Convection Initiation and Early Evolution of Supercells in the Great Plains and Southeast*
Advisors: Dr. Michael Coniglio and Dr. Erik Rasmussen
- 2017–2019 📖 **M.S. Meteorology**, University of Oklahoma
Thesis: *The Effects of Terrain on an Idealized Tornado using a Large-Eddy Simulation*
Advisors: Dr. David Bodine and Dr. Anthony Reinhart
- 2013–2017 📖 **B.S. Meteorology & B.A. in Mathematics**, University of Oklahoma
GPA: 4.0 / 4.0
Capstone: *The Effects of Veer-Back-Veer Wind Profiles on Storm Mode*

Professional Experience

- 2025–..... 📖 **Meteorological Radar Scientist**, Rainmaker Technology Corporation, Norman, OK
- Engineering radar data processing and QPE validation workflows to deliver accurate precipitation insights that directly inform Rainmaker’s cloud seeding strategies for sustainable water resource management.
 - Developing and refining algorithms for radar-based precipitation estimation, storm structure analysis, and target cloud identification, advancing ground-breaking techniques to enhance rainfall and support conservation goals.
 - Designing visualization tools and applying advanced quality control methods to translate complex radar datasets into actionable intelligence, enabling more effective cloud seeding missions and measurable impact on water availability.
- 2023–2025 📖 **Post-Doctoral Research Associate**, Cooperative Institute for Severe and High-Impact Weather Research & Operations (CIWRO), Norman, OK
- Leading research project with two graduate students to examine the impact of backing winds within the effective inflow layer on supercell evolution and the development of tornado-like vortices using CM1 simulations.
 - Integrated multi-Doppler wind and reflectivity syntheses into a diabatic Lagrangian framework to retrieve thermodynamic data for observed supercells.
 - Enhanced Python and FORTRAN processing scripts to improve radar quality control, objective analysis, and multi-Doppler synthesis workflows.
 - Conducted detailed case studies of low-level supercell dynamics using kinematic and thermodynamic syntheses alongside in-situ measurements from TORUS supercell observations.
 - Compiled and analyzed multi-Doppler wind syntheses from TORUS field campaign data, including ground-based, airborne radar, and WSR-88D observations, to evaluate internal boundaries and updraft characteristics in supercells.
 - Collaborated with the Warn-on-Forecast (WoFS) team to assimilate quality-controlled radar observations from the 22 May 2023 field campaign into WoFS modeling efforts.
 - Participated in DELTA (2024) and LIFT (2024 & 2025) field campaigns, contributing to the collection of low-level flow observations in tornadic thunderstorms via mobile mesonet, windsonde, and LiDAR platforms.

Professional Experience (continued)

2019–2023

■ **Graduate Research Assistant**, CIWRO & OU School of Meteorology, Norman, OK

- Analyzed supercell dynamics using multi-Doppler and diabatic Lagrangian techniques with TORUS research radar data from the 17 May 2019 event.
- Collaborated on a project investigating the dissipation of the 10 December 2021 long-track tornado by comparing tree-fall observations with large-eddy simulated (LES) vortex behavior over similar terrain.
- Examined the relationship between cell mergers and supercell evolution through manual analysis of WSR-88D data using GR2 Analyst, contributing as a co-author to a formal publication in *Monthly Weather Review*.
- Participated in the collaborative PERiLS, TORUS, and TORUS-LiTE field campaigns, collecting supercell observations across diverse geographical regions in the United States.

2017–2019

■ **Graduate Research Assistant**, Advanced Radar Research Center & OU School of Meteorology, Norman, OK

- Enhanced FORTRAN code for toy-model vortex simulations to enable variations in translational velocities, surface roughness lengths, and terrain features.
- Conducted comprehensive analyses on the effects of surface characteristics, including systematic variations in terrain, on vortex dynamics, resulting in a first-authored publication in the *Journal of Atmospheric Sciences*.
- Coordinated field experiments utilizing the Atmospheric Imaging Radar to sample supercell structures across the Great Plains.

2015–

■ **Teaching Experience / Mentoring**, OU School of Meteorology, Norman, OK

- Lead instructor for Atmospheric Dynamics III in Fall 2024 and 2023
- Mentor for Senior Capstone Group in Fall 2023 and 2022
- Teaching Assistant for Atmospheric Dynamics III in Fall 2022, 2021, 2020, and 2019
- Teaching Assistant for Atmospheric Dynamics II in Spring 2022 and 2021
- Teaching Assistant for Intro to Weather & Climate in Spring 2020
- Teaching Assistant for Intro to Meteorology Lab I in Spring 2017 and Fall 2016
- Teaching Assistant for Programming for Meteorology in Spring 2017 and Spring 2015
- University of Oklahoma Athletic Tutor for Mathematics in Fall 2015
